BHEL commissions 250 MW Thermal Unit in Gujarat

Bharat Heavy Electricals Limited (**BHEL**) has successfully commissioned a 250 MW coal-based thermal power plant in Gujarat. The unit has been commissioned at Gujarat State Electricity Corporation Limited's (GSECL) Sikka Thermal Power Station (TPS) by **BHEL**, on EPC basis. Sikka TPS is located near Jamnagar, one of the major industrial towns of Gujarat. Two units of 120 MW each, supplied and executed earlier by **BHEL** are already in operation at Sikka. Another 250 MW unit, presently under execution at Sikka TPS, is also in an advanced stage of commissioning. The sets of this rating class, supplied by **BHEL**, are considered significant in the Indian power sector. **BHEL** has so far contracted 251 sets of this rating class. GSECL has also recently entrusted **BHEL** with an order for setting up an 800 MW supercritical coal-based project at Wanakbori, on EPC basis. **BHEL's** installed base of over 150,000 MW of power plant equipment coupled with its rich experience makes it a choice of utilities in the country.
